

Canada's Third Seacoast

"Canada's Third Seacoast" is a nickname for the St. Lawrence Seaway. Canada and the United States built the Seaway together. It was completed in 1959 and, in combination with the Great Lakes Waterway, allows large ocean-going ships to travel 2,342 miles from the Atlantic Ocean to Duluth, Minnesota, U.S.A. If you were to sail from the Atlantic Ocean to Duluth, Minnesota, U.S.A., on Lake Superior, you would travel on a river, on canals, through locks, and on lakes.

On the map, start at the X and draw how you would travel by water to Duluth. When you come to a number on the map, find the question with the same number and use the map to answer it.

1. As you leave the open sea you enter a large body of water called the _____ of _____.
2. Traveling on the St. Lawrence River, your ship passes by the French-speaking city of _____.
3. Just before entering the Welland Canal you pass by the largest city in Canada, _____.
4. Your six hour journey through the eight locks of the Welland Canal takes you around this famous "watery" landmark: _____.
5. Your ship now passes through three more great lakes. They are _____, _____, and _____.
6. You are sorry that you will miss seeing this lake: _____.
